

1. OVERVIEW

This pack is a collection of high-quality pixel art assets designed for top-down environments. All sprites are optimized for an 8x8 grid to ensure maximum modularity and detail in a low-resolution style.

2. TECHNICAL SPECIFICATIONS

Base Grid: 8x8 pixels.

Pixels Per Unit (PPU): Recommended setting is 8.

Filter Mode: Point (no filter).

Compression: None (recommended for pixel art).

Texture Type: Sprite (2D and UI).

3. FOLDER STRUCTURE

All assets are located in `Assets/PaleHero/Abandoned_Building_Interior/` to prevent conflicts with your existing project files:

Artwork: Sprite sheets and sliced PNGs.

Animations: Animation clips and controllers for interactive objects.

Prefabs: Pre-configured objects with shadow layers and proper sorting.

Scenes: Includes a `Demo_Showcase` scene with the recommended layout.

Source: Includes original .Aseprite files for advanced editing.

4. INTERACTIVE FEATURES

Locker: Pre-animated with "Opening", "Closing", and "Bobbing" (stealth shake) states.

Restroom Doors: Pre-animated "Opening" and "Closing" states.

Shadow System: Most props use a dedicated shadow layer. If you modify a sprite's size (e.g., the 16x17 wall clock), remember to adjust the sprite boundaries in the Sprite Editor to prevent shadow clipping.

5. HOW TO USE

Open the `Demo_Showcase` scene to see the intended setup and sorting layers.

Drag and drop prefabs from the Prefabs folder into your hierarchy.

For Tilemaps: Use the provided `TilePalettes` for quick environmental building.

6. LICENSE

This asset pack is governed by the Standard Unity Asset Store EULA.

Commercial Use: You are free to use these assets in any number of personal or commercial game projects.

Modifications: You can freely modify the assets.

Restrictions: You may NOT redistribute or resell these assets (original or modified) as standalone files or stock art.
